Now search engines use a different algorithm. 209 different criteria are evaluated. Coding, speed, content, images used on the website must be in harmony.

It is not enough just to have a website anymore, it is especially important for mobile compatibility and even for applications and social media accounts.

You can know; how old the people entering your site, from which devices, how many minutes they stand, how many pages they visit.
Do you want to learn people who enter your site click on which points on your site, reads which page, from which country, from which browser, with which device?

You can catch the right interaction with your audience by seeing liked and unliked, read and unread pages on your site.
We would like to introduce you to our VH FX Software at this point.

It has all the coding that search engines want. You will find that the content / products you enter have risen to the first page of search engines very quickly.

We thought so many details that we added almost everything you could want. It is completely in the criteria of search engines.
SEO moves your store in a much used street. It brings people looking for products and services together with the most appropriate budget. Besides, its main benefits are; brand awareness, reputation and sales increase.

It is important to carry out project-specific work, as each website, each project has its own unique structure. As a result of the analyzes that a good expert will undergo the project, he / she should start his processes by creating a correct work plan.
What are we doing differently at this point?
With our self-developed analysis system -VH GT- we determine the SEO service that suits you.

And we start the project by looking for answers to the following questions:
- How many words should your page have?
- How many social media accounts should your page be shared with?
- How many websites should your page be shared on?
- Which tags should be used for your page?
- How suitable are your website codes for search engines?

While the ads published on Google, Facebook, Instagram should actually reach your target audience, it also means that you waste your budget for those who are not interested. This is actually the most important factor in your not getting efficiency from Adwords.

Thanks to VH GT Software, advertisements are shown to your target audience. Most importantly, it is organized by us in which time period, which gender, how many age category and people with the potential to purchase, with the right timing.
